Summary: Software Engineering Technician student with a diverse background spanning skilled trades, manufacturing, logistics, quality control, and customer service. Experienced in troubleshooting complex systems, working in fast-paced environments, and solving real-world technical problems. After several years in HVAC and industrial trades, returned to school to pursue a career in software development and apply practical problem-solving skills to technology.

Education: Software Engineering Technician (Online) at Centennial College (expected graduation: 2027)

Relevant Coursework: OOP, Software design, database development, web application development, software testing, systems analysis

---

Technical Skills: Programming: C#, Java, Python, SQL, MERN Stack

Tools: Jira, Git, GitHub, VS, VS Code, IntelliJ, Eclipse, SQL Dev.

Concepts: Object-oriented design, debugging, problem solving, software testing, database design, team organization

---

Core Strengths: Troubleshooting & diagnostics, technical problem solving, quality assurance, root cause analysis, customer communication, team collaboration, adaptability, continuous learning

---

School Development Projects:

- Designed and developed software applications as part of Software Engineering coursework.
- Applied object-oriented programming principles and software development best practices.
- Worked with databases, version control, and debugging tools.

Personal Projects:

- Developed independent software projects to explore programming concepts and strengthen practical development skills.
- Built tools and applications for personal use, focusing on automation, problem solving, and learning new technologies.

Technical Experience:

HVAC Technician (Various employers including contractor)

- Diagnosed and repaired residential and commercial HVAC systems.
- Interpreted wiring diagrams, schematics, and technical documentation.
- Performed systematic troubleshooting of mechanical and electrical issues.
- Communicated technical findings directly to customers.
- Managed service calls independently while maintaining safety and quality standards.

Manufacturing, Logistics & Quality Control Experience:

Vehicle Quality Control

- Performed inspections and identified defects in manufacturing environments.
- Followed established quality assurance procedures.
- Maintained detailed documentation and reporting standards.

-Warehouse & Logistics Operations

- Worked in high-volume shipping, receiving, and distribution environments.
- Maintained inventory accuracy and operational efficiency.
- Consistently met production and delivery targets.

-Food Service & Kitchen Operations

- Worked effectively in fast-paced, high-pressure environments.
- Coordinated with team members to ensure quality and consistency.
- Demonstrated strong time-management and prioritization skills.
